ADVISORY OPINION # 2

FORMULATED: July 31, 1987

REVISED: March 2011, May 2001, November 1991, July 1991

REVIEWED: July 2021, July 2017, July 2007, May 2006, July 2005, June 2003, July 1998, January 1997, March 1993

QUESTION: Is it within the role and scope of responsibilities of the registered nurse (RN) to remove pleural and mediastinal chest tubes as ordered by the physician?

The State Board of Nursing for South Carolina acknowledges that it is within the role and scope of responsibilities of the RN to remove pleural and mediastinal chest tubes as ordered by the physician.

The Board recognizes this responsibility as an expanded role for the RN and requires the following stipulations:

1. Each establishes policies, procedures, and/or standing orders that address:
 - a. proximity of the physician when tubes are removed by the nurse;
 - b. type of supervision/oversight provided by the physician;
 - c. physician evaluation of patient condition indicative of need for the tube to be removed;
 - d. guidelines for patient monitoring prior to and after tube is removed; and,
 - e. guidelines for dealing with potential complications or emergency situations

2. The organization documents the RN's completion of special education and training to include supervised clinical instruction and skill competency verification. Recognizing these responsibilities are an additional act for the RN.

This statement is an advisory opinion of the Board of Nursing as to what constitutes competent and safe nursing practice.
