**Advisory Opinion # 48**

**Formulated:** March 2004

**Revised:** November 2017

**Reviewed:** January 2020, July 2007; May 2006; July 2005

**Question:** Is it within the scope of practice of the Registered Nurse (RN) to remove trans-thoracic (epicardial) pacing wire following open-heart surgery?

The State Board of Nursing acknowledges that it is within the role and scope of responsibilities of the RN to remove trans-thoracic (epicardial) pacing wires following open-heart surgery as ordered by the physician.

The Board recognizes this responsibility is an additional act for the RN and requires the following guidelines:

1. If the nursing department determines that implementation is in order, the appropriate policies, procedures, and protocols should be developed. Protocols must specify qualifications, special education, and training regarding the role of the selected RN to include didactic and clinical competencies.
2. The procedure is performed only in a medical facility where a cardiothoracic surgeon is present within the facility during the procedure and for one hour following the procedure should complications arise.
